

DESCRIPTION

Alameda Creek drains the largest watershed in the Southern San Francisco Bay Region, about 700 square miles. The creek historically supported anadromous fisheries of steelhead trout, coho salmon, and Pacific and river lamprey, and still supports one of the best native stream fish assemblages in the San Francisco Bay Region. Although dammed in a number of locations, much of Alameda Creek remains natural, with the exception of a large earthen channel Army Corps project in the lower end of the creek. Alameda Creek is a high quality creek with the potential to support significant native fish populations, if restored.

REASON FOR CCA IDENTIFICATION

Alameda Creek was a 1998 303(d)-listed impaired waterbody that is adjacent to Eden Landing Ecological Reserve.
